CEQ CALL AUDITS — Process Flow (v1.2)

Automated call auditing using Genesys, Langflow/MDS and Matcha Missions · updated with live-run and synthetic-test findings

Turning conversations into compliant, high-quality support

Data Stores (reference data)

- **Transcript cache** — /tmp/qa_transcript_cache. 24 h retention; purge runs only when the Transcriber next runs. Key includes all transcription settings.
- **Temporary audio** — /app/langflow/_audio_tmp. Deleted after transcription (default on). Manual test uploads in flow storage persist.
- **Whisper models & packages** — _whisper_models, _pylibs. Software only; persistence across redeploys unconfirmed.
- **ServiceNow hourly .xlsx** — mission 50641 / folder 31790. Read in memory; old files replaced by Power Automate. Over 200 rows = one row per chunk.
- **KB & Procedures library** — KB mission. Client list must cover every audited client.
- **CEQ Policy** — ICL folder; authority on attribute definitions.
- **Circuit state** — ceq_audit/llm_circuit.json; model failure counts only.

Legend

- Process step (working)
- Process step (needs build / attention)
- Skipped / deferred
- Decision / gate
- Matcha Mission (LLM)
- Data store
- Normal flow
- Retry / poll loop
- NEW — Added or changed in v1.2

CEQ Attribute Weights (Call)

Attribute	Weight
Opening	5
Empathy, Accountability & Ownership	10
Etiquette & Professionalism	8
Issue Identification	8
Troubleshooting & Resolution	12
Process Adherence	14
Hold & Wait	8
Ticket Classification & Escalation	12
Case Documentation	18
Closing	5
Target	**96%**

All-or-nothing per attribute. N/A excluded from the total; UNKNOWN makes the audit INCOMPLETE.

Exception Handling (summary)

Condition	Handling
HTTP 202 / empty body	Poll + retry; NOT_READY after max attempts → retry list
HTTP 401	Token expired → refresh; fatal if repeated
HTTP 403	Missing recording permission
HTTP 404	No recording (dev org) → log and skip
PROCESSING / TRANSCRIPT_NOT_READY	Re-run later; finished transcript collected from cache; no LLM cost
HTTP 524 (~100 s)	Gateway timeout; background job continues → retry
Mission 408 / 504 / 522 / 524	Next model in chain; not counted by circuit breaker
Invalid JSON / missing keys	Next model → fallback JSON → review; PARSE_ERROR if unrecoverable
Circuit open	Model skipped for the configured minutes
PHI_BLOCKED	Route to manual QA
PENDING_EXPORT / NO_EXPORT	RETRY_LATER
Ticket NOT_FOUND	Potential critical only; manager review
kb_gap / low confidence	KB advisory only
Single-track audio	Speaker labels unreliable; regenerate or verify manually
Repetition / low confidence	Review flag; verify against recording

Changes since v1.1

1. **Step 16 corrected:** High confidence AND scope confirmed → enforceable; otherwise advisory. v1.1 had the branches reversed.
2. **Steps 11–14:** deterministic Pre-Match now runs before the mission; the Ticket Gate keeps a code MATCHED result over the mission.
3. **Mission 1** is SNOW Ticket Confirm (50648); the export file lives in mission 50641.
4. **Step 10 added:** transcript QA check for dual-track mode, speaker mapping, repetition and confidence.
5. **Timeout:** Cloudflare ends requests at ~100 s (HTTP 524), not ~120 s.
6. **Domain prompt:** vocabulary only; sentence prompts were echoed into the transcript as agent speech.
7. **Step 19:** Prompt Template replaced by the Audit Payload Builder with VERIFIED FACTS.
8. **Resilient Mission Caller** and PHI gate shown on every mission call.
9. **Test path:** metadata times in UTC (ET + 4 h in EDT), true stereo audio, track 0 = agent, PII redaction off.
10. **Step 23 added:** HTML report and Mission Cost Summary; retention behaviour documented.

Prompt > 1,000,000 tokens	Truncate transcript / reduce payload
